POLYSOFT COLOUR RANGE

PolySoft is a specifically designed product for wet area surfaces and children's playgrounds, where comfort and safety are paramount.

PolySoft's colour range has been carefully selected to provide an unlimited choice of striking combinations for pool surrounds and water play areas. The unique combination of the soft texture of PolySoft and the natural colour range, gives designers, architects and all involved, the freedom to create areas that are aesthetically pleasing and safe underfoot.

OUTDOOR AREAS AND CHILDRENS PLAYGROUNDS

PolySoft is the ideal surface solution for children's playgrounds. It is also suited to public pathways, rooftop areas, entertainment venues and any application that requires a soft seamless flexible surface.

When combined with the appropriate cushion underlay, PolySoft is an exceptional impact attenuating safety surface meeting all fall height requirements. PolySoft addresses all the common issues usually associated with traditional surfacing. These include cracking, fading and surface temperature.

WET AREAS

PolySoft is perfectly suited for use around pools, in water theme parks, rehabilitation hydrotherapy pool entries, splash pads and any application where a chlorine resistant surface treatment is required. The heat reduction in surface temperature makes barefoot travel possible, even in extreme environments.

PolySoft can be tailored to suit individual project considerations, such as slip resistance and drainage. PolySoft also has unique properties that allow it to be trowelled onto vertical surfaces, making it suitable to line pool interiors.

PolySoft APPLICATION TECHNIQUE

PolySoft is manufactured using a combination of flexible and durable coloured polyolefin granules and an aliphatic polyurethane binder specifically formulated to meet strict quality guidelines. Designers, architects and clients can select from an unlimited choice of striking colour combinations, and a customised graphic element such as a logo or image can be incorporated into the **PolySoft** surface.

Maintenance

As with all flooring products, **PolySoft** requires good housekeeping to maintain a fresh new looking finish. **PolySoft** is easily cleaned with a power washer, due to a very high strength bond between the particles and the binder. We recommend a high quality, neutral detergent with a stiff broom and subsequent hosing down. Alternatively, a high pressure cleaner can be used with a fan shaped tip. Regular cleaning will keep your **PolySoft** installation looking good for many years to come.

Please avoid products such as concentrated bleach, organic solvents, petrol and hydraulic fluid.
